

# Texas A&M Aggie Park

COLLEGE STATION, TEXAS

YEAR	2019–2022
SIZE	22 acres
USE	Campus greenspace, large scale events, outdoor amphitheater, event lawn, events facility, terraced lakes, open space entertainment

This 22-acre site is an iconic meeting point at the heart of Texas A&M's main campus for use during stadium events and throughout the year. Campus green space is positively linked to the social, physical and mental well-being of all who use it. Aggie Park is part of the trend of rethinking access to large-scale sporting event arenas and stadiums, and creating designated spaces for the public to gather.

- + The project creates an upgraded open greenspace for large scale events such as Aggie Ring Day, as well as game-day tailgates.
- + It overlaps program from tailgating and concerts to daily activities such as students studying and recreating together.
- + New additions such as an outdoor amphitheater, event lawn, new events facility, and terraced lakes to enhance open space entertainment.
- + The lakes – which serve as detention ponds to store groundwater – create a much-needed breeze in the heat of Texas summers in addition to acting as a flood prevention system for the sloped landscape during high amounts of rainfall.
- + A two-story 79,000 square foot alumni center, designed by Lake|Flato Architects, completes the south side of the campus. It also has ecological functions to perform; there is stormwater detention below the parking lot to maximize usable space.
